

Program Coordinator

University of Florida, Gainesville, FL

The Southeast Center for Integrated Metabolomics (SECIM) at the University of Florida was recently established as an NIH Common Fund Metabolomics Center. SECIM offers metabolomics services and develops new technologies in 4 technical cores:

- Global and targeted LC-MS services
- Global NMR and biomarker identification
- Advanced MS
- Bioinformatics

The Administrative Core coordinates all activities and the Promotion and Outreach Core facilitates new projects through education, public relations, and pilot and feasibility funding. SECIM analytical cores have a unique strength in the development of ^{13}C -based LC-MS and NMR methods and tissue analyses.

We seek a full-time Program Coordinator (PC) for SECIM. The ideal candidate will have a Ph.D. in chemistry or a related field, an established track record in metabolomics, with expertise in LC-MS and/or NMR methods. The PC plays a critical role at the center of the SECIM, by coordinating activities among the cores and supporting users. The successful PC will be an outstanding manager with experience in establishing robust processes with quality assurance and quality control at every step in sample handling and analysis. Experience with data analytic approaches in metabolomics will be important as the PC will facilitate successful studies and their dissemination for SECIM users.
